iv) Answer each question in eight or ten sentences.

1. a) Write down the better ways to consume water resources..
(OR)
b) What happens when people migrate? explain.

2. Read the passage given and Comment.

In Himachal Pradesh, one may wonder why the gender bias is less. Besides education, this can be seen in other areas as well. Child mortality (children dying within a few years of birth) in Himachal Pradesh is lower for girls than for boys, in contrast to most other states. One major consideration is that many Himachali women are themselves employed outside the home. Women who work outside the homes are economically independent and self-confident. They have greater say in household decisions, including children's education, health, birth, upkeep etc. also, being employed themselves, Himachali mothers expect their daughters to work outside home after marriage. Schooling therefore comes naturally and has become a social norm.

(OR)

- b) Read the passage given and write your opinion

More recently, scientists are discovering large volumes of methane under the frozen tundras of the far northern latitudes (mainly in the vast expanses of northern Russia). As

global temperature increases, the ice in the tundra melts more. The methane that is trapped under the ice escapes into the atmosphere, increasing the global temperatures. In turn, this causes even more ice to melt, releasing even more methane and so on. Methane is said to be even more powerful than carbon dioxide as a greenhouse gas.

3. a) Describe the public facilities of your area.

(OR)

b) Write down the factors that influence the present Indian climate.
